

Laser procedures, consider the possibilities

Gingivectomy

Immediate results, no scalpel or sutures. Final impressions can be taken at the same appointment, maximising convenience and accuracy.

Frenectomy

Bloodless and suture free release of the maxillary and mandibular frenums. Improved access for oral hygiene, close orthodontic diastemas and improvement of impaired speech.

Gingivoplasty

Remove redundant or hyperplastic tissue within a bloodless field with minimal (if any) post operative pain. Impressions can be taken at the same visit for your convenience.

Troughing

Laser troughing, when used as part of a dentist's impression technique, can greatly improve long term gingival cosmetic results. Great fitting restorations with no marginal shrinkage.

Other procedures:

Abscess
Aphthous ulcer
Biopsy
Canker sores
Contouring
Curettagde decon - bacterial
Denture sore
Distal wedge
Drain abscess
Emergence profile

Expose teeth
Fibroma
Flap
Frenectomy
Frenotomy

Periimplantis
Perio-chronic
Perio-acute
Pulpotomy
Tissue retraction

Tissue welding tongue tie
Troughing
Ulcers general
Vestibuloplasly
Whitening/bleaching

Aphthous Ulcers

Desensitise painful aphthous ulcers; typically stopping pain within hours of treatment and enhance healing.

Curretage

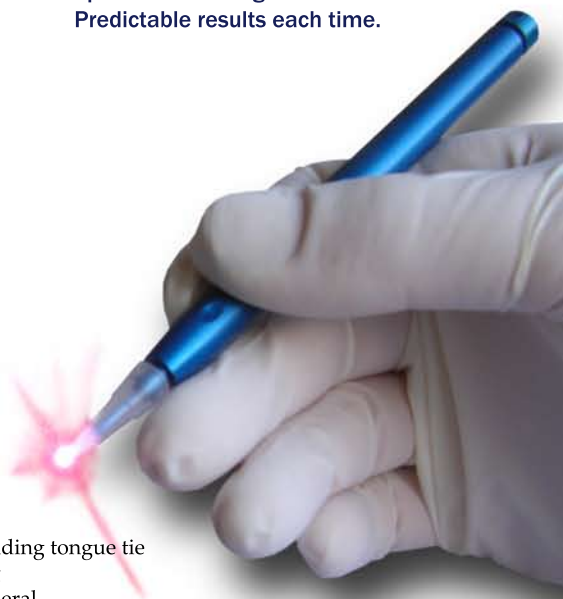

Non-surgical periodontal treatment allowing access to deeper calculus deposits.

Crown Lengthening

Minimum pain and bleeding, no scalpel or sutures and no post operative shrinkage. Predictable results each time.
